

SClinic Technical Audit

Executive report for sclinic.com.tr and sclinic.ae

Evidence-based assessment of performance, security, SEO, and UX.
Prepared for client presentation and rebuild decision-making.

PERFORMANCE

0.71 / 0.65

Lighthouse scores

SECURITY

**No hardening
baseline**

Legacy stack and weak public
posture

RECOMMENDATION

Rebuild

The current stack is costly to
patch

Executive summary

Both sites are functional, but the evidence points to the same pattern: a legacy PHP/Plesk stack, heavy client-side dependencies, repeated homepage content, and avoidable performance and accessibility debt. The sites are operating, but they are not yet at the standard expected for a premium healthcare brand.

- Legacy stack: nginx + PHP/7.4.33 + PleskLin
- Same JavaScript exception on both homepages
- The .ae sitemap still contains Turkish legacy URLs
- Lighthouse reports layout shifts, unused JS, and cache waste

Decision

Proceed with a rebuild rather than layering more fixes onto the current stack.

Commercial implication

A cleaner rebuild gives the team a better platform for conversions, localization, and SEO growth.

Evidence table

Site	Perf	A11y	Best Practices	SEO
sclinic.com.tr	0.71	0.61	0.54	0.83
sclinic.ae	0.65	0.81	0.54	0.83

Evidence snapshot

Technical profile

- nginx + PHP/7.4.33 + PleskLin
- Legacy jQuery-era assets and plugin stack
- Google Tag Manager, Google Ads, Facebook Pixel
- No major hardening headers in the captured response

SEO and crawlability

- robots.txt allows crawling and lists a sitemap.
- .com.tr sitemap: 60 unique URLs.
- .ae sitemap: 62 unique URLs, with Turkish legacy routes still present.

Priority metrics

Metric	sclinic.com.tr	sclinic.ae
Performance	0.71	0.65
LCP	2.2s	3.5s
CLS	0.434	0.344
Unused JS	311 KiB	429 KiB
Cache savings	2,172 KiB	1,936 KiB

Recommendation and roadmap

Recommended architecture

Modern CMS + reusable component system + CDN-backed hosting + structured local SEO + analytics governance.

Suggested delivery roadmap

Discovery

1–2 wks

Inventory content, routes, analytics, redirects

Design

2–3 wks

Define the visual system and page templates

Build

4–8 wks

Implement CMS, layouts, forms, and SEO foundations

QA + Launch

1–2 wks

Validate performance, forms, redirects, and analytics

Stabilize

1–2 wks

Monitor errors, conversions, and search visibility

Success criteria

- Faster pages and fewer layout shifts.
- Clearer consultation funnels.
- Cleaner localization and URL handling.
- A platform the team can maintain confidently.

Next steps

Immediate actions

- Approve the rebuild direction and scope.
- Map current pages to the new content model.
- Prioritize URLs that must preserve search equity.
- Prepare design and development kickoff materials.

Prepared by 3KG

Use this PDF for decision-making and stakeholder review.

Why this matters

The current sites still deliver the right brand promise, but the technical foundation is holding them back. A rebuild gives the team a cleaner platform, a better user journey, and a stronger base for growth in both markets.

Evidence files included: headers, robots, sitemap captures, browser snapshots, console evidence, and Lighthouse JSON for both sites.
